

ComicCraft

Phase 2 – Requirement Analysis

1. Introduction

ComicCraft is a web-based project designed to help users create comic-style stories from their ideas. This phase identifies the functional and technical requirements needed to develop and use the system.

2. Functional Requirements

- Users should be able to enter a story idea or prompt.
- Users should be able to provide character and setting details.
- Users should be able to select a tone and art style.
- The system should generate and display comic story content.
- The generated result should be presented in a clear and readable format.

3. Non-Functional Requirements

- The application should have a simple and user-friendly interface.
- The system should respond to user inputs efficiently.
- The application should be accessible through a web browser.
- The generated output should be clearly displayed.
- The project should be maintainable and easy to update.

4. Hardware Requirements

- Computer or laptop with a modern processor.
- Minimum 4 GB RAM recommended.
- Internet connection for accessing the web application.

5. Software Requirements

- Operating System: Windows, Linux, or macOS.
- Web Browser: Google Chrome, Microsoft Edge, or similar modern browser.
- Development tools such as Visual Studio Code.
- HTML, CSS, JavaScript and Python files as required by the project.

6. User Requirements

- Users should have basic knowledge of using a web browser.
- Users should be able to enter a simple story idea.
- Users should be able to select or enter the required comic options.
- Users should be able to view the generated comic output.

7. Expected Result

The requirement analysis defines the features, technical needs, and user expectations for ComicCraft. These requirements will guide the design and development of the project.
