

# ComicCraft

## Phase 7 – Project Documentation

### 1. Project Introduction

ComicCraft is an AI-oriented web project concept for helping users create comic-style stories from simple ideas.

### 2. Project Purpose

The project aims to make comic story creation simpler by providing an easy interface for entering ideas and presenting a structured result.

### 3. Main Features

- Story prompt input.
- Character and setting inputs.
- Tone and art-style options.
- Comic generation interaction.
- Clear output presentation.
- Web-based access.

### 4. Technologies Used

- HTML for the web page structure.
- CSS/JavaScript for interface and interaction where applicable.
- Python for supporting project logic where applicable.
- GitHub for source-code and documentation storage.
- Netlify for live web deployment.

### 5. Project Files and Records

- Source-code files are maintained in the GitHub repository.
- Phase-wise project documents are maintained as PDF records.
- The deployed project is available through the live web application URL.

### 6. User Guide

- Open the ComicCraft web application.
- Enter a story idea.
- Provide character and setting information if required.
- Select the desired tone and art style.
- Use the Generate Comic option.
- Review the generated output.

## **7. Expected Result**

Complete project documentation that records the purpose, features, technologies, usage process and development information of ComicCraft.
